# TOP 4 REASONS TO STUDY PSYCHOLOGY

## 1. Understand people better

Many people are attracted to and choose to study Psychology to gain insight into their own and other people's behaviours, perceptions, and motivations. Psychology offers students the chance to explore the human mind and discover why we think and act the way we do.

## 2. Progress into varied career possibilities

Many graduates enter the profession as clinical psychologists, educational psychologists, forensic psychologists, occupational and health psychologists across a range of industries. A significant number of graduates continue their research and become academics while others pursue careers in areas such as business, marketing, neuroscience and consulting.

## 3. Improve wellbeing in society

The many and varied sub-disciplines in Psychology all have one objective in common: ***to improve the lives and wellbeing of people and society***. This might be in schools and colleges, in the workplace, in therapeutic settings or in the wider community. As a psychologist, you could work towards improving people's wellbeing.

## 4. Enhance your transferable skills

You will gain many transferable skills during your studies, including teamwork, critical thinking, project management and research. These qualities are highly sought after by many employers across different sectors. You will also learn how to engage with people effectively and be able to discuss topics clearly. Communication is a critical element of our daily lives, and good interpersonal skills are beneficial for job interviews and workplace relationships.

## We'd love to hear from you!
